

# Curvature and the geodesic equations

Copy/paste the following cell in a notebook and edit the data between the red lines. Then evaluate it to see the results.

Details on the code and how it works can be found at the end of the notebook.

```

\phi_{rr} + \frac{2(r_r+r\cot[\theta]\theta_r)\phi_r}{r} &= 0
\end{aligned}$$

## Postscript

The code in this notebook is based on James Hartle's Mathematica programs written as companions to his book "Gravity: An Introduction to Einstein's General Relativity", available from the Book's site:  
<http://web.physics.ucsb.edu/~gravitybook/mathematica.html>

The original program was written by Leonard Parker, University of Wisconsin, Milwaukee (see the Acknowledgement section in the end of this notebook). The code in this notebook is a modification of the original program, adapted for the needs of the course "General Relativity and Cosmology" offered at the National Technical University of Athens, by Konstantinos Anagnostopoulos (<http://physics.ntua.gr/konstant>). The site of the course for the Spring 2023 can be found at <http://physics.ntua.gr/konstant/GR>.

This is the *Mathematica* notebook *Curvature and the Einstein Equation* available from the book website. From a given metric  $g_{\alpha\beta}$ , it computes the components of the following: the inverse metric,  $g^{\lambda\sigma}$ , the Christoffel symbols or affine connection,

$$\Gamma^\lambda_{\mu\nu} = \frac{1}{2} g^{\lambda\sigma} (\partial_\mu g_{\sigma\nu} + \partial_\nu g_{\sigma\mu} - \partial_\sigma g_{\mu\nu}),$$

( $\partial_\alpha$  stands for the partial derivative  $\partial/\partial x^\alpha$ ), the Riemann tensor,

$$R^\lambda_{\mu\nu\sigma} = \partial_\nu \Gamma^\lambda_{\mu\sigma} - \partial_\sigma \Gamma^\lambda_{\mu\nu} + \Gamma^\lambda_{\eta\nu} \Gamma^\eta_{\mu\sigma} - \Gamma^\lambda_{\eta\sigma} \Gamma^\eta_{\mu\nu},$$

the Ricci tensor

$$R_{\mu\nu} = R^\lambda_{\mu\lambda\nu},$$

the scalar curvature,

$$R = g^{\mu\nu} R_{\mu\nu},$$

and the Einstein tensor,

$$G_{\mu\nu} = R_{\mu\nu} - \frac{1}{2} g_{\mu\nu} R.$$

You must input the covariant components of the metric tensor  $g_{\mu\nu}$  by editing the relevant input line in this *Mathematica* notebook. You may also wish to change the names of the coordinates. Only the nonzero components of the above quantities are displayed as the output. All the components computed are in the *coordinate basis* in which the metric was specified.
